

evsl Agile Tuner Demodulator (ATD) User's Guide R1.2

- The ATD is an Agile Tuner Demodulator that will tune both CATV (CA) and Off-Air (OA) channels, (55MHz to 800MHz).
- The On-Screen display shows the current channel and also indicates if it is an Off-Air or CATV signal. To change the channel, simply press the switch in either the UP or DN direction to increase or decrease the channel number.
- Pressing the UP or DN button will change the channel one at a time. The On-Screen display will disappear after a few seconds. Holding the UP or DN button will cause the ATD to scroll through all the channels.
- **NOTE:** The Display will indicate **OA: Off-Air, or CA: (CATV)**, to change from one to the other you must cycle through all the channels until the indicator changes from "OA" to "CA" or "CA" to "OA"
CATV (CA): Ch 2 to Ch 125
Off-Air (OA): Ch 2 to Ch 69
